From the welcome-screen, click on "create code"

[create code](#) | [help](#) | [log out](#)

main domain for squeeze-/oto-page:
always in format **domain.com** or **subdomain.domain.com**, no **www** or **http://**

redirect location:
where visitors will be redirected when they return to your page

|

For "domain" enter your domain-name and top-level domain, without www or http://. If your pages reside on <http://www.yourdomain.com>, you enter "yourdomain.com" in the domain-field.

In "redirect location", you enter where you want to send your visitors when they return to the page with the code.

If you are generating code for a squeeze page, press "get squeeze-page code":

[create code](#) | [help](#) | [log out](#)

Your code/s are ready!

It is vital that there are no whitespaces or empty lines before the code!

code for your squeeze-page
Insert this code as the first line on your squeeze-page.

```
<?php eval(gzinflate(base64_decode('DdBLcoIwAADQfU/hThOWIFiw048DCpOAoIB8ZNMhGEwwgoATxNO37whv/fO1vpP7BPoc?>
```

Use your mouse or keyboard to mark the code in the first box, and copy and paste that into the source-code of your squeeze-page, on the very first line. Note that there must be no whitespaces or empty line before the code.

Next, repeat the procedure with the code in the second box, and insert that into the source-code of your thank-you page. The same applies here, no whitespaces or empty lines before the code.

Now, when a visitor returns to your squeeze page, he/she is automatically redirected to the page you entered in the "redirect"-field.

If you are generating code for an OTO-page as well, press "back" in your browser, and your values will have been saved in the input-fields:

The screenshot shows a web interface for generating code for a CovertSqueezePage with OTO. The page has a blue header with the title "COVERT SQUEEZE PAGE with OTO" in a stylized font. Below the header, there are links for "create code", "help", and "log out". The main content area contains instructions for the domain format and a form with two input fields and two buttons. The first input field contains "covertsqueezepage.com" and the second contains "http://www.covertsqueezepage.com/thankyou.html". The buttons are labeled "get squeeze-page code" and "get oto-page code". At the bottom, there is a copyright notice for Björn Stannek Persson & ScriptTricks.com and a footer with the title and "Design by - Jeff Stewart".

Next, press "get oto-page code", and you will be presented with the code for your One Time Offer page:

[create code](#) | [help](#) | [log out](#)

Your code/s are ready!

It is vital that there are no whitespaces or empty lines before the code!

code for your OTO-page

Insert this code as the first line on your OTO-page.

```
<?php eval(gzinflate(base64_decode('
DdFJcoJAAAD Ae17hTS0OgowC1RgLBBUQAV1ELimQYTHDvjqvT/oLvF/+21dpNYNDgBYJ
?>
```

© Björn Stannek Persson & ScriptTricks.com

Use the same copy and paste procedure as for squeeze pages, and you are all set to go. Your OTO page is visible only once.
